The JAITE COMPANY

MANUFACTURERS OF PAPER AND PAPER BAGS

JAITE, OHIO.

SINCE 1905

Published every other Saturday. Annual subscription: in the United States, \$3.00; Canada and Mexico, \$4.00; other countries, \$5.00. Entered as second-class matter, January 15, 1910, at the Post Office at Philadelphia, Pa., under Act of March 3, 1879. Registered in United States Patent Office. Publication office, 1900 Chestnut St., Phila. 3, Pa.

A Complete Service

THE strategic factory locations of The American Agricultural Chemical Company, as shown on the accompanying map, assure prompt, dependable service for the complete line of products listed below.

We manufacture all grades of Commercial Fertilizers, Superphosphate, Agrinite Tankage, Bone Black, Bone Black Pigments (Cosmic Black), Bone Ash, Bone Oil, Dicalcium Phosphate, Monocalcium Phosphate, Gelatin, Agricultural Insecticides (including Pyrox, Arsenate of Lead, Calcium Arsenate, etc.), Trisodium and Disodium Phosphate, Phosphorus, Phosphoric Acid, Sulphuric Acid, Ammonium Carbonate, Ammonium Fluosilicate, Magnesium Fluosilicate, Potassium Fluosilicate, Phosphorus Pentasulphide, Phosphorus Sesquisulphide (lump), Zinc Fluosilicate, Salt Cake; and we are importers and/or dealers in Nitrate of Soda, Cyanamid, Potash Salts, Sulphate of Ammonia, Raw Bone Meal, Steamed Bone Meal, Sheep and Goat Manure, Fish and Blood. We mine and sell all grades of Florida Pebble Phosphate Rock.

This new 1945 Model Bag Printer will print any size or type of bag made of paper, burlap, cotton or paper-lined material. It is built in one, two and three colors.

The highest type of printing can be done with this machine at the lowest possible cost. It will also do an excellent job of printing on used bags.

We are in a position to make prompt delivery on printing plates also printing inks for the Fertilizer industry.

No. 12

Preliminary Report on Fertilizer Consumption

By A. L. MEHRING and HILDA M. WALLACE

*Division of Soils, Fertilizers and Irrigation
Bureau of Plant Industry, Soils and Agricultural Engineerin
U. S. Department of Agriculture, Beltsville, Maryland*

A SURVEY was made of fertilizer and plant-food consumption for the year ended June 30, 1944, by the Division of Soils, Fertilizers, and Irrigation in co-operation with the Fertilizer Industry, the War Food Administration and various state officials. A full report, which gives details of methods used, sources of information and the agencies cooperating, is in course of publication as a Department of Agriculture circular. This interim report is offered in order to make the principal data available to the industry and public at an earlier date than would otherwise be possible.

On June 30, 1944, 675 companies including 37 farmer-owned cooperatives were in the business of manufacturing fertilizers. These companies operated 978 separate plants. Nearly all of these companies submitted reports, or the tonnages were obtained from State Reports. Details on grades and kinds

of fertilizers were available on 97.6 per cent of the estimated total consumption of fertilizers.

The consumption of mixed fertilizers and of separate materials is shown in Table I with similar data for the 1943 fiscal year. The 1944 total consumption is the highest recorded, but the 1945 consumption is certain to exceed this total. Some states consumed less in 1944 than in 1943, as may be seen from the table.

Only 262 different grades of mixed fertilizers were sold in the year ended June 30, 1944, as compared with over a thousand before 1940. One-sixth of the total sales of mixed fertilizers consisted of the 2-12-6 grade.

The quantities of materials used to make mixed fertilizers and used as such in agricul-

¹ Grades containing 18 to 22 per cent available P_2O_5 . Includes 712,073 tons distributed by A. A. A.² Includes Chilean, synthetic and by-product nitrate of soda.³ Used as fertilizer filler. In addition over 20,000,000 tons were consumed in agriculture as a soil amendment.⁴ Includes 9,453 tons used in T. V. A. demonstrations.⁵ As reported by the fertilizer industry. About 200,000 tons more were sold for use in agriculture by other industries.⁶ In addition about 44,000 tons were used in converting run-of-pile superphosphate into 20 per cent material. 30,926 tons used in T. V. A. test demonstrations are included.⁷ Including 64,165 tons distributed by A. A. A.⁸ Approximately 41,580 tons additional were used as fertilizer on cotton farms.⁹ Additional quantities were disposed of by city sewage disposal plants.¹⁰ In addition 39,500 tons were used as a soil amendment.¹¹ Ammonium nitrate-limestone mixtures, urea.¹² Hoof and horn meal, dried blood, various seed meals, animal tankage, etc.¹³ Ammoniated superphosphate, basic lime phosphate, base goods, calcined phosphate rock, phosphoric acid, precipitated bone and spent bone black.¹⁴ Cement mill dust, wood ashes, cotton hull ashes, etc.¹⁵ Copper sulphate, zinc sulphate, borax, magnesium oxide, sulphur, etc.

(Continued on page 28)

Spencer Chemical Company Enters Fertilizer Nitrogen Field

Jayhawk Ordnance Plant Acquired from Government. Ammonium Nitrate and Fertilizer Ammonia in Large Production. Kenneth A. Spencer, Prominent Midwest Industrialist, Heads Company. Joe E. Culpepper Appointed Fertilizer Sales Manager.

CONVERSION from war to peace has taken place on a large scale at the Jayhawk Ordnance Works near Pittsburg, Kans. The Spencer Chemical Company, successor to the wartime operator, the Military Chemical Works, Inc., have taken over this huge nitrogen plant for the production of basic chemicals for industry and agriculture.

This transition marks one of the first conversions from war to peace in the Middle West. During the war the company was awarded the Army-Navy "E" with Stars for

dioxide, dry ice, refrigeration ammonia, industrial anhydrous ammonia, technical grade ammonium nitrate, nitric acid and, particularly for agriculture, ammoniating solutions and fertilizer ammonium nitrate. The Jayhawk Works of the Spencer Chemical Company, located near Pittsburg, Kans., has production capacity in excess of 300 tons per 24-hour day of anhydrous ammonia and 300 tons per day of ammonium nitrate solution.

The introduction of Spencer Chemical Company into the field of industrial chem-

Spencer Chemical Company Works, Pittsburg, Kansas

outstanding operating performance. The commercial operation of this company brings to the field of industrial chemistry management and experience gained during the war and permits the economic utilization of mid-western natural resources for the production of useful goods.

For three generations the Spencer family have been engaged in the development and distribution of natural resources of the Middle West. The name is closely allied with the production of coal and its by-products.

The Spencer Chemical Company contemplates the production of basic chemical products, including methanol, liquid carbon

istry with large going facilities at hand insures a substantial and lasting source of nitrogen and other chemical products for industry and agriculture.

During the period that rehabilitation of areas devastated by the war exist, the company will concentrate on the manufacture of ammonium nitrate and anhydrous ammonia. In addition to the principal works near Pittsburg, the company will operate two ammonium nitrate graining plants—one near Parsons, Kans., and a second near McGregor, Tex. The fertilizer ammonium nitrate produced at these points will be distributed by the company in carload lots through established

distribution channels. The company will maintain its own selling organization with headquarters in Kansas City, Mo.

In order to help create a better balance between industry and agriculture in the Middle West, Kenneth A. Spencer, president of the company, worked toward a plan that would make the abundant natural resources of the area available to agriculture and industry. During 1939 and 1940 engineering studies were made and submitted to the War Department proposing the utilization of the mineral resources of the Middle West, including coal, pyrite, natural gas, salt and phosphate rock through an integrated family of plants to produce strategic war materials.

**Kenneth A. Spencer, President,
Spencer Chemical Company**

The location and construction of the Jayhawk Ordnance Works resulted as a part of this plan. It was then conceived and has since been proven that well-designed plants located in the safe interior of the United States, adjacent to abundant natural resources, have a better than average chance of continuing commercial operation after the war.

The Jayhawk Ordnance Works was built and operated under a prime contract with the Military Chemical Works, Inc., a wholly owned subsidiary of the Pittsburg and Midway Coal Mining Company. That corporation is continuing its peacetime operation under the name of the Spencer Chemical Company.

Since completion of the Jayhawk Plant it has consistently operated in excess of its designed capacity. Its war record is the result of splendid physical facilities, abundance of raw materials, ingenuity of management and complete cooperation of the operating personnel.

On V-J Day the company renewed its formal proposal to the United States Government to acquire for commercial operation the Jayhawk Ordnance Works. This contract was completed on January 29, 1946, with the War Assets Administration. By that date Spencer Chemical Company had become the largest producers of ammonium nitrate fertilizer in the United States. Forced production of agriculture and the scarcity of commercial fertilizer, together with the increased demands for food from this country, has created an unprecedented demand for chemical fertilizer and other nitrogen products.

Nitrogen is the growth promoting element of the soil. It is essential to the rehabilitation of the lowlands of Europe, which have been flooded by sea water and to great areas in Asia. The allocation of nitrogen products for export will be controlled by the Government. It is the hope of the Spencer Chemical Company that production will be sufficient to satisfy the growing domestic demand for nitrogen in this country and still permit, under Government allocation, substantial shipments to the devastated countries abroad.

The Spencer Chemical Company is a private corporation financed with private funds furnished largely by the Pittsburg and Midway Coal Mining Company, its stockholders and directors, together with a substantial private investment by J. H. Whitney & Company of New York City, which investment was made after a thorough investigation of the record and potentialities of the company.

President Kenneth A. Spencer

Kenneth A. Spencer, president of the Spencer Chemical Company, has been active in the industrial developments of the Middle West since his graduation from the University of Kansas in 1926.

Mr. Spencer was chief engineer of the Pittsburg and Midway Coal Mining Company from 1936 to 1938. He then served as general manager and chief engineer of that company from 1938 to 1940. Since 1943, he has served as president of that coal company, operating strip coal mines in Arkansas, Kansas, Missouri, Illinois, and Kentucky. Mr. Spencer organized and is president of the Mineral Products Company of Kansas City, Mo.; he

THE N. F. A. CONVENTION

The challenge confronting the fertilizer industry in meeting the constantly rising demands for its products, both at home and abroad, was the theme of the 21st Annual Convention of the National Fertilizer Association held at French Lick, Indiana, on Tuesday and Wednesday, June 11th and 12th. About 350 members of the industry attended and the addresses were of more than usual interest.

Tuesday, June 11th

In opening the session, Maurice H. Lockwood, Chairman of the Board and President-elect, expressed confidence that Americans will display "intelligent selfishness" in sharing fertilizer supplies with less fortunate peoples abroad.

Mr. Lockwood also called upon fertilizer industry leaders for "cool reasoning and calm judgment" in attempting to adjust themselves to problems of distribution within this country. "Certainly we are equal to such a test of industry statesmanship," he said, "even though it will at times try our tempers and call upon us for tolerance and understanding."

While recognizing that emergency conditions have caused limited fertilizer shortages in certain areas, he ventured the prediction that the 1945-46 production year will witness a new record output of 13,860,000 tons, a five per cent increase over the preceding year.

"No one need apologize for such a record," declared Mr. Lockwood. "Of course, not all demand has been filled in all areas. The difference between supply and demand is not great, however, and future requirements will be filled just as rapidly as construction and conversion will permit us to create or adapt facilities to the needs. Anyone acquainted with the problems involved in trying to build and equip manufacturing facilities knows only too well how slowly such work may be completed under present conditions and at what elevated costs. In spite of this we may rest assured that the spirit of enterprise is alive and responsive in our industry. The western and midwestern areas are particularly active in initiating such projects, and the older fertilizer using areas of the east and south are re-equipping and supplementing their production, blending and distribution facilities much more rapidly than is commonly appreciated."

Other speakers at the Tuesday session included Frank Rising, General Manager of Automotive and Aviation Parts Manufacturers, Inc., who emphasized the need for business management to help bring back normal, progressive and productive relations with employees. He advocated management have more trained experts to put its ideas and policies into words easily understood by employees and to develop a closer personal touch with them.

Dr. Harry J. Reed, of the Indiana Agricultural Experiment Station, stressed the need of educating the farmers in the needs of soil conservation and the proper methods of attaining a permanent maximum efficiency from the land.

Reports on the public relations program of the Association were made by C. T. Prindle, of Swift and Company Fertilizer Works, Chairman of the Public Relations Committee, and by John G. Mapes, of Hill and Knowlton.

The annual dinner on Tuesday evening was well attended. Weller Noble presided and the address of the evening was made by Hugh Craig, editor of *Oil, Paint and Drug Reporter*, who spoke on "The Economy of Free Enterprise." The Association's new picture, "Hunger Signs," was also shown. A happy feature of the program was the presentation of a gold wrist watch to H. B. Baylor as an appreciation of his services as Association president during the War years. Mrs. Baylor also received a wrist watch as a reward for "lending" her husband to the Association.

Wednesday, June 12th

The Wednesday session included talks on the "World Food Situation" by James A. Stillwell of the U. S. Department of State, and on "Agricultural Developments in Arkansas" by Dr. R. P. Bartholomew of the Arkansas Experiment Station.

The report on the work of the Plant Food Research Committee, by its chairman, Dr. H. B. Siems, was received with great interest. The intensive agricultural practices of the war years have brought new problems, in that the larger use of fertilizer sometimes increases crop yields to a point where the crop removes more plant food from the soil than is put in. In some of the newer crops, such as soybeans, the best system of soil practice has not yet been scientifically determined and the results from various amounts of fertilizer do not seem to fall into any consistent pattern. The subcommittees

(Continued on page 24)

It's Our Move

On June 14, 1946, the publication offices of THE AMERICAN FERTILIZER were moved to larger and more modern air-conditioned quarters at 1900 Chestnut Street, Philadelphia 3. There will be no change in the telephone number, LOCust 1234 except that, beginning July 5th under the new system adopted for all Philadelphia phones, the number will be LOCust 7-1234.

All of the publishing activities of Ware Bros. Company will be located at the new offices, including THE AMERICAN FERTILIZER HAND BOOK, THE NATIONAL COUNTY AGENT AND EXTENSION REVIEW, and THE NATIONAL COUNTY AGENT NEWS SYNDICATE.

Potash Company of America Issues Anniversary Booklet

In connection with the tenth anniversary of their entrance into the production of muriate of potash, the Potash Company of America has issued an attractive 28-page brochure entitled *The Salt of the Earth*. This booklet, which is very adequately illustrated, gives a most complete picture of the mining and refining of potash as it is carried on in the company's plant at Carlsbad. Of especial interest is the description of the method developed by the engineering staff whereby the muriate crystals are separated from the clay and other chemicals in the crude ore by a mechanical flotation process, thus retaining the natural red color of the sylvinitic ore, which is used by the company as a distinguishing characteristic of their product.

There is also included a very comprehensive article by R. A. Pierce, assistant general manager, and L. D. Anderson, consulting engineer, which covers in detail the history and geology of the New Mexico potash deposits, the methods of mining used, and a technical description of the company's mining and refining installations. The various items of machinery used in every operation are described in detail as to make, size and output which makes the article of special interest to the plant engineer.

This booklet is a valuable addition to the library of every user of potash. A copy will be sent on request to any of the Potash Company of America offices in Carlsbad, New York, Atlanta or Peoria, Ill.

May Fertilizer Tag Sales

Fertilizer tax tag sales in May, 1946, continued above a year ago according to reports from state officials of the 16 reporting states to the National Fertilizer Association. May tag sales amounted to 520,000 equivalent tons of fertilizer and were 8 per cent larger than for May, 1945, and 19 per cent larger than for May, 1944. The 11 Southern states accounted for an increase of 4 per cent over May, 1945, with seven of the 11 states reporting increases, while the Midwest reported sales 27 per cent greater than for May, 1945, with four of the five states showing increases.

In the 11 months, July through May, of this fertilizer year, tag sales totaled 8,060,000 equivalent tons and were 10 per cent higher

than for the same period of 1944-45 and 17 per cent ahead of the same period of 1943-44. The Southern states increased 7 per cent and 12 per cent over the corresponding periods of one and two years ago, respectively, and the Midwest showed increases of 23 per cent and 46 per cent, respectively.

Sales in the 11 months, July through May, have been steadily increasing each year since the 1939-1940 period, with increases in both geographic areas. Comparing the 11 months' sales in the 1945-1946 period with the sales in the corresponding period of 1939-40, the following increases took place: the South increased 2,249,000 tons or 51 per cent; the Midwest increased 851,000 tons or 159 per cent; and the aggregate of the 16 states increased 3,100,000 tons or 62 per cent.

FERTILIZER MATERIALS MARKET

NEW YORK

End of Spring Shipping Season Turns Interest Toward Future Supplies. Improvement for Next Season Not Expected. New Prices on Principal Materials Not Yet Announced. Potash Again on Allocation.

Exclusive Correspondence to "The American Fertilizer"

NEW YORK, June 10, 1946.

With shipments against current contracts practically completed, interest in the fertilizer materials market is mostly confined to prospects for obtaining supplies during the coming fertilizer year. It is generally conceded that the tight supply situation experienced during the past six months will continue through 1946-47, and, in view of increasing requirements in other countries, supplies may become even harder to obtain. However, it is felt that American agriculture will receive plant foods in the amount at least equal to that consumed during the past year.

As the active shipping period is concluded, a large amount of interest for materials remains unsatisfied, and inventories of all basic fertilizers are at extremely low levels. Strikes and transportation difficulties, along with inability to obtain plant equipment, have made it impossible for producers of some basic materials to complete many contracts.

Export demand continues to be heavy and remains unsatisfied, except for relief shipments. Some offerings of foreign nitrogenous are reported in the market, but at figures more than double the prices importers are allowed to pay under OPA ceilings.

Sulphate of Ammonia

No further improvement to be noted in the supply situation, and shipments against previous commitments continue to be below demand. Uncertainty as to contract prices for the new fertilizer season is the dominant note in this market as no announcement has been made as yet by government officials.

Nitrate of Soda

There are practically no stocks available, but demand should be adequately covered by scheduled shipments due from South America early next month. Production of domestic material has been recently cut back further.

Organic Materials

Movement is strictly against previous contracts and, except for nitrogenous material as noted above, there have been no new offerings in the market. Relief in the supply position of organics cannot be seen in the immediate or near future.

Superphosphate

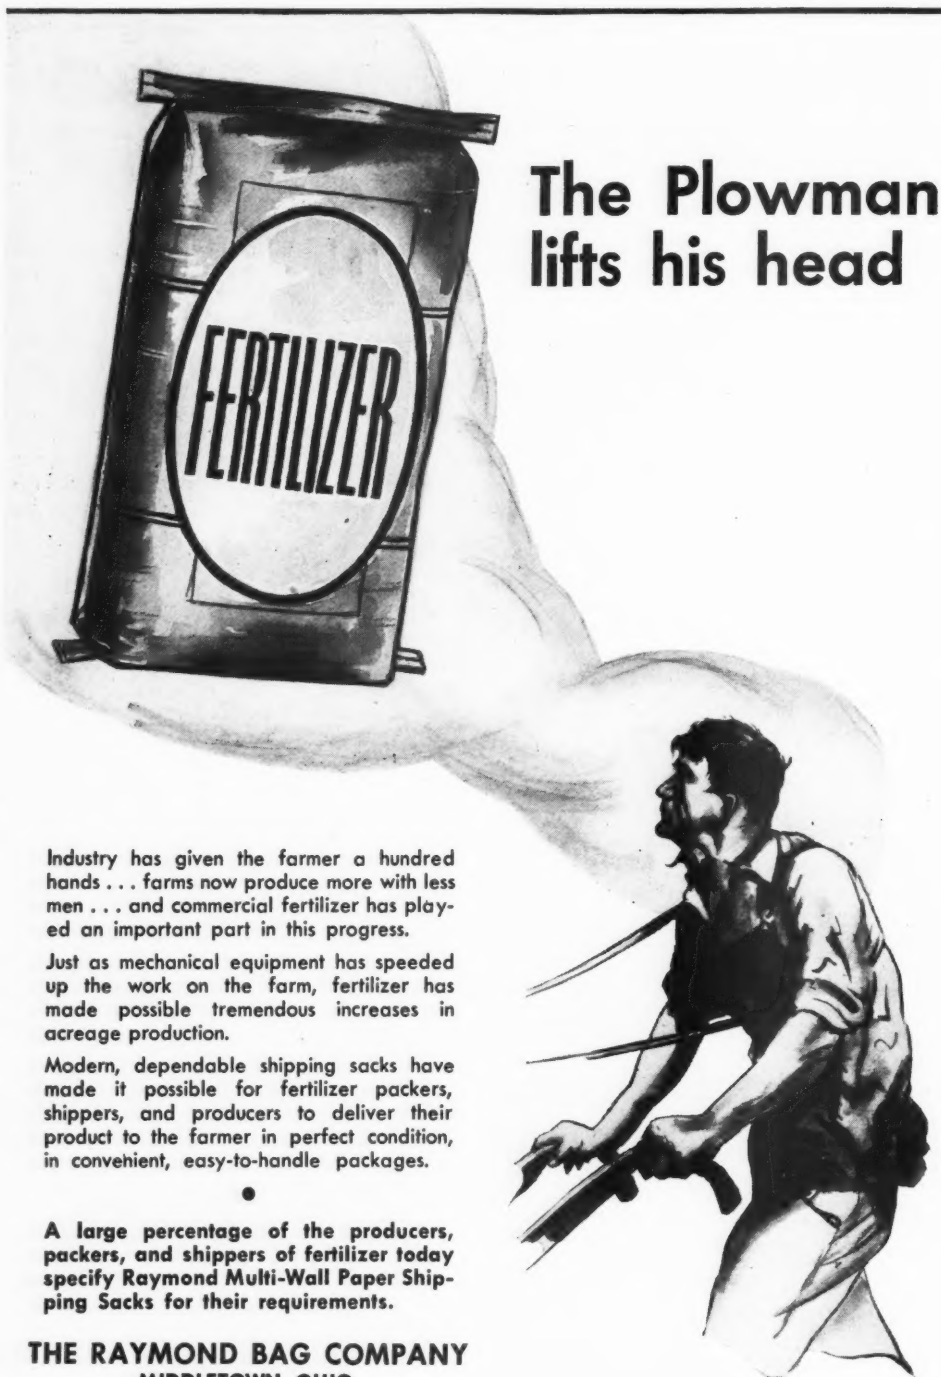

Abnormally high demand is continuing rather than decreasing, as is usual at this time of the season. Production remains at record-high levels with buying interest exceeding present supplies. No announcement has been made as yet as to contract prices for the new season.

Phosphate Rock

Pressure from acidulators for early shipments continues, but facilities of the producers are unable to satisfy demand. It has been rumored that sizable shipments of North African material will arrive in this market, but it is doubted that sufficient quantities can be obtained from this source to ease the present tight position.

Potash

The Civilian Production Administration has issued the expected potash re-allocation order and the procedure to be followed will be substantially the same as during the period when potash was formerly under allocation. Fertilizer mixers have received, or will shortly receive, full contract commitments, but the market remains definitely tight with no spot material available to take care of additional demand. Price schedules for the new season have not been announced to date, but it is generally believed that supplies during 1946-47 will adequately take care of domestic requirements.

The Plowman lifts his head

Industry has given the farmer a hundred hands . . . farms now produce more with less men . . . and commercial fertilizer has played an important part in this progress.

Just as mechanical equipment has speeded up the work on the farm, fertilizer has made possible tremendous increases in acreage production.

Modern, dependable shipping sacks have made it possible for fertilizer packers, shippers, and producers to deliver their product to the farmer in perfect condition, in convenient, easy-to-handle packages.

•

A large percentage of the producers, packers, and shippers of fertilizer today specify Raymond Multi-Wall Paper Shipping Sacks for their requirements.

THE RAYMOND BAG COMPANY
MIDDLETOWN, OHIO

PHILADELPHIA

Ample Capacity for Future Increase in Output if Materials are Available. Situation Tight in All Lines. Price Increases Expected.

PHILADELPHIA, June 10, 1946.

Notwithstanding the fact that the consuming demand for mixed fertilizers is about over, the continued shortage of raw materials is viewed with alarm; in fact, some plants have been forced to close down temporarily. On the other hand, quite a few manufacturers are planning to increase their productive capacity as soon as building operations are possible. However, those in position to know say the fertilizer capacity is ample to meet the needs of next year if the raw materials are available, and if not too much is exported.

Sulphate of Ammonia.—It is expected that there definitely will be an increase in the ceiling price, and that the present price basing system will be changed. Meanwhile, though the production has increased slightly, it cannot keep up with the demand and shipments are behind requirements. There is talk of opening a few of the Government plants that produced sulphate during the war.

Nitrate of Soda.—Demand is strong and supply insufficient. It is brought out that even if the Chilean production comes along normally, it still cannot meet the total nitrate needs, due to the reduced domestic production. It is being suggested that nitrate be placed under allocation.

Castor Pomace.—No new business is reported.

Blood, Bone, Tankage.—Production is very much reduced, and only a few lots not up to the feeding standard have moved.

Fish Scrap.—Inquiries far exceed any offerings and reports of the catch in Southern waters are not too favorable. The stuff goes to the feeding trade, anyway.

Phosphate Rock.—Shipments take everything that is mined, and still deliveries are behind requirements, which makes the accumulation of inventories impossible. While normally there is not much demand at this time of the year, the present market is decidedly tight.

Superphosphate.—The output this year was much higher than last, but still it did not meet the consuming demand. The market is definitely tight and it is difficult to procure anything for early shipment.

Potash.—There is some very limited movement in outside material, but the demand does not subside, and the market is very tight. Re-allocation has been announced but local mixers say they have no formal confirmation as yet.

CHICAGO

No Improvement in Sight in Fertilizer Organics Situation. Shortage of Packing House Materials for Feed Market.

CHICAGO, June 10, 1946.

The protests of fertilizer manufacturers against the action of the Milwaukee Sewerage Commission in discontinuing sale of Milorganite in bulk has as yet developed no complaints from Washington authorities. Meanwhile the organic situation remains as tight as ever. Offerings are eagerly sought, but no supply in the middle western territory is in sight.

The short supply of meat proteins in the feed market causes continued urgent demand and lack of offerings at ceiling prices.

Ceiling prices are:

High grade ground fertilizer tankage, \$3.85 to \$4.00 (\$4.68 to \$4.86 per unit N) and 10 cents; standard grades crushed feeding tankage, \$5.53 per unit ammonia (\$6.72 per unit

CHARLESTON

Shortage in Materials for Next Season Expected. Demand Continues for All Materials. Fish Catch Much Less than Normal.

CHARLESTON, June 10, 1946.

Indications point to the fact that, in spite of increased production for the new season, there will be a shortage of 30 to 35 per cent in nitrogen and superphosphate, 5 to 10 per cent in potash.

Organics.—Absolutely nothing is being offered and, when offerings come out later, they will doubtless be considerably reduced in quantity. Nitrogenous producers hampered in getting raw materials by Government Order M-390 which gives glue production priority.

Ammonium Nitrate.—This is still in heavy demand. Supply is inadequate.

Nitrate of Soda.—Deliveries delayed, not only on Chilean but also on domestic.

Phosphate Rock.—Still in tight supply and shipments delayed by car shortage.

Fish Scrap.—It is reported that the catch so far is only one-fourth to one-third of same period last year.

Change in Ceiling on Potash Sulphate Spot Sales

An amendment to RMPR 205 to establish maximum prices on spot sales of potash sulphate brought into the country was issued by the Office of Price Administration to become effective June 1st.

The amendment changes section 29 of the price order to read as follows:

The maximum price that may be charged for spot sales of domestic sulphate of potash (basis 90 per cent K_2SO_4), in bulk, shall be \$39.25 per ton. West Coast potash ports, and \$36.25 per ton, other potash ports, basis ex-vessel the potash port which has the lowest carload rail freight rate on potash to destination, plus the customary delivery charges from the end of the ship's tackle to the buyer's destination.

The American Potash & Chemical Corporation is planning to build a two-story office building in Los Angeles.

Multiwall paper bags are now serving American industry in high-speed machine packaging of over 300 different chemical, food, fertilizer and rock products. These five "case histories" outline the detailed factual experience of leading concerns in the use of fast, cost-saving St. Regis Packaging Systems.

**WATCH THESE PAGES FOR
FURTHER CASE HISTORIES**

THESE "CASE HISTORIES" SHOW HOW ST. REGIS PACKAGING SYSTEMS INCREASE PRODUCTION - REDUCE PACKAGING COSTS

1 manufacturer of ready mixed cake flours . . . installation of a St. Regis Valve-bag Packaging System raised production from 9,000 lbs. per hour to 18,000 lbs. per hour with no increase in labor costs.

4 prominent salt manufacturer increased packaging output 18% with the same crew by changing over to the St. Regis Valve-bag Packaging System . . . and effected a saving of 45% in overall packaging costs.

2 several well-known fertilizer manufacturers were using eight men to pack burlap bags. St. Regis Valve-bag Packaging Systems enabled these companies to "up" production 20% per hour with only 5 men packing and handling.

5 manufacturer of cocoa installed a St. Regis Valve-bag Packaging System. Result: an increase of 62½% in production, a saving in labor costs of 60%, a saving in container costs of over 55%.

3 manufacturer of granite poultry grit formerly employed a 14-man crew to fill, sew and handle a maximum output of 60,000 lbs. per hour. Installation of a St. Regis Valve-bag Packaging System enabled poultry grit manufacturer to double production with smaller crew . . . reduce container costs 54.4%.

The "case histories" illustrated above have proved of great value to manufacturers throughout the country . . . perhaps they will be of equal value to your company. Write for the folders that interest you the most . . . or, if you would prefer to have a St. Regis sales representative talk over your specific problems with you, just 'phone or write your nearest St. Regis Sales Office.

Years of experience in the pioneering of automatic packaging in multiple-layer paper bags has enabled St. Regis to recommend the correct packaging system to suit the needs of manufacturers of over 300 different products including chemical, food, fertilizer and rock products. The coupon is for your convenience.

Potash Again Placed on Allocation

The Civilian Production Administration has placed potash salts under allocation, beginning June 1st, by issuing Schedule 120 (potash) to General Allocation Order M-300 (chemicals and allied products). The new allocation procedure is about the same as the wartime procedure under Schedule 98.

The 1946-47 year is divided into two periods: Period 8 from June 1, 1946, to March 31, 1947; Period 9 from April 1, 1947, to May 31, 1947. Filing date for fertilizer manufacturers for Period 8 was June 5th, and for Period 9 it will be January 15, 1947. To avoid delay in deliveries, suppliers may deliver to any person in any allocation period, before the receipt of a specific authorization, an amount equal to 20 per cent of the suppliers deliveries to that person during a similar period of the year ended May 31, 1946. These amounts are to be deducted from the allocation when it is issued later.

Authorization for the use of potash is not limited in duration. Any potash which has been delivered to a fertilizer manufacturer before the end of a period may be used at any time thereafter.

Orders totaling less than 50 tons (K_2O

basis) during Period 8 or 10 tons K_2O during Period 9 are not subject to allocation. Also application and specific authorization are not required for the following: (1) Delivery of potash by any person who is not a producer or importer of potash. However, a person who receives potash from a producer or importer pursuant to specific authorization shall redeliver it only in accordance with the authorization. (2) Acceptance of delivery of potash from any person who is not a potash producer or importer. (3) Use of potash received from any person who is not a potash producer or importer, provided that the user is not a fertilizer manufacturer or a potash producer or importer.

The Civilian Production Administration states that any newly organized fertilizer company or existing company that has constructed or is constructing new mixed fertilizer plants should present Civilian Production Administration immediately with the following information: (1) New plant capacity, specifying number of shifts and expected days of operation per year. (2) New plant location. (3) Volume of mixed goods to be processed. (4) Proposed formulas with average potash content. (5) Do you have a firm source of supply for your phosphatic and

April Sulphate of Ammonia Production

The effects of the coal strike were reflected in the April sulphate of ammonia figures of the U. S. Bureau of Mines. Output dropped to 47,222 tons, a decrease of 23 per cent from March and of 32 per cent from April, 1945. Since the beginning of the year, production has run over 80,000 tons behind the same period of 1945. Sales continued to run ahead of production, with the result that stocks on hand at the end of April were only 15,176 tons as compared with 20,610 tons on March 31st.

Superphosphate Production for April Breaks Record

The figures of the U. S. Bureau of Census show that production of superphosphate of all kinds during April totaled 763,539 tons, figured on the basis of 18 per cent A.P.A. Comparable figures were 716,775 tons for March, 1946, and 632,403 tons for April, 1945. During the month 939,551 tons were shipped to mixers or used in the producer's plants and consequently the figure for stocks on hand dropped from 675,130 tons on March 31st to 519,430 tons on April 30th.

Production of normal (18 per cent) superphosphate was the highest on record, exceeding October, 1945, production by about 6,000 tons. While the output of concentrated was slightly less than the preceding month, it was about 20 per cent ahead of April, 1945. Detailed figures for the different types of superphosphate are as follows:

	Normal 18% A.P.A.	Concentrated 45% A.P.A.	Base Goods 18% A.P.A.

in the manufacture of fertilizers of dependable quality and uniform grade when you use

International Crop-Producing **FERTILIZER MATERIALS**

These two things you can be sure of when you depend on International Fertilizer Materials—the quality of the ingredients and their excellent mechanical condition. Both are important to you in manufacturing costs and in the uniformity of your own fertilizers. You get, in addition, the advantages of International's large volume production and the prompt, efficient service from its conveniently located plants.

tons a year and was formerly operated by the Stauffer Chemical Co. Details as to this plant can be obtained from the WAA Regional Office, 209 South LaSalle St., Chicago, Ill. The other plant is located at Front Royal, Va., with a capacity of 160,000 tons a year and was operated during the war by the General Chemical Co. Details can be obtained from the WAA Regional Office, Richmond, Va.

MAY TAG SALES

(Continued from page 14)

Comparative figures for the fertilizer year to date for the past three years are given in the following table:

FERTILIZER TAX TAG SALES			
July Through May			
	1945-46	1944-45	1943-44
11 Southern states . . .	6,675,140	6,219,665	5,937,971
5 Midwestern states . . .	1,384,720	1,125,654	945,554
Total—16 states . . .	8,059,860	7,345,319	6,883,525

Tag sales in South Carolina and Tennessee in the first five months of 1946 were just under the sales in the same five months of 1945. The other 14 states reported increases ranging from 2 per cent in Georgia to 75 per cent in Missouri with a 9 per cent increase in the total of the 16 states. There was a 17 per cent increase in the 16 states when compared with the January-May sales of 1944.

CONVENTION

(Continued from page 13)

dealing with the fertilization of the different crops are actively at work on these problems.

The business session on Wednesday adopted a budget of \$215,000 for the coming year, with the same rate of dues as in the past year. The membership of the Association was comprised of 430 companies, according to the report of Leon H. Davis, chairman of the Membership Committee.

CLASSIFIED ADVERTISEMENTS

Advertisements for sale of plants, machinery, etc., and for help and employment in this column, same type as now used, 60 cents per line, each insertion.

WANTED—Experienced fertilizer control chemist for midwest laboratory of large well-known corporation. In reply give complete details, experience, qualifications. Address "190," care THE AMERICAN FERTILIZER, Philadelphia.

Officers and Directors Elected

The following were elected to the Board of Directors for the term ending in 1945.

At Large

John E. Powell, Smith Agricultural Chemical Company, Columbus, Ohio; J. E. Totman, Summers Fertilizer Company, Baltimore, Md.; Louis Ware, International Minerals and Chemical Corporation, Chicago, Ill.

District

F. N. Bridges (4), Farmers Cotton Oil Company, Wilson, N. C.; W. H. Gordon (2) Chamberlin & Barclay, Inc., Cranbury, N. J.; L. D. Hand (6), Pelham Phosphate Company, Pelham, Ga.; Weller Noble (12), Pacific Guano Company, Berkeley, Calif.; W. Newton Long (3), Miller Chemical and Fertilizer Corporation, Baltimore, Md.; M. H. Whipple (1), Olds and Whipple, Inc., Hartford, Conn.

The following were also elected to fill other vacancies in the Board:

J. A. Chuska, Eastern States Farmers Exchange, West Springfield, Mass.; E. B. Helgeson, Magnolia Fertilizer Company, Seattle, Wash.; B. T. Truitt, Worcester Fertilizer Company, Snow Hill, Md.; W. L. Waring, Lyons Fertilizer Company, Tampa, Fla.; Y. O. Reed, Lion Oil Company, El Dorado, Ark.

The new Board of Directors at their organization meeting elected Weller Noble, of Pacific Guano Company, Berkeley, Calif., chairman of the Board, and R. L. King, of the Georgia Fertilizer Company, Valdosta, Ga., as vice-chairman. The Board confirmed the previous selection of Maurice H. Lockwood as full-time President of the Association, and D. S. Murph as Secretary-Treasurer.

Torrence Rejoins Link-Belt

William C. Carter, president, Link-Belt Company, has announced that at a special meeting of the Board of Directors held in Chicago May 7, 1946, arrangements were made for George P. Torrence to again become associated with Link-Belt Company.

Mr. Torrence will rejoin the Link-Belt organization on July 1, 1946 as executive vice-president, and will become president of Link-Belt Company November 1, 1946, at which time Mr. Carter retires as president, in accordance with the company's retirement plan.

Mr. Torrence was with Link-Belt Company from 1911 to 1936, when he resigned as president. He has been in Cleveland since 1936 as vice-president and general manager of The Rayon Machinery Corporation, a subsidiary of The Industrial Rayon Corporation, and as president of The Cleveland Pneumatic Tool Company.

SPENCER CHEMICAL CO. ENTERS FERTILIZER NITROGEN FIELD

(Continued from page 11)

also serves as vice president in charge of operations of the Midwest Smokeless Fuel Corporation, St. Louis, Mo. (this corporation is now the Midwest Radiant Corporation of which Mr. Spencer has been director since 1938). He is also president of the Osage Coal Company. Mr. Spencer's wartime activity included the building for the War Department and operation of a \$30,000,000 ordnance plant near Pittsburg, Kans.

Mr. Spencer serves as director for the First National Bank of Kansas City, Mo.; National Coal Association, Washington, D. C.; and president of the Associated Industries of Kansas, Wichita, Kans.

Culpepper Appointed Fertilizer Sales Manager

Joe E. Culpepper, formerly general sales manager with Synthetic Nitrogen Products Corporation, has assumed the duties of director of sales, Fertilizer Division for the Spencer Chemical Company.

Born, reared, and educated in Mississippi, Mr. Culpepper continued his contacts with Southern industry and agriculture by accepting the position of commercial agronomist with Synthetic Nitrogen Products immediately upon graduation from Mississippi State College in 1929. Later, he served that com-

pany as district sales manager with extensive experience in the Georgia, Alabama, Tennessee, Arkansas, Louisiana, Texas, and Oklahoma area. He was later connected with the American Cyanamid Co. as district sales manager in the Delta district.

Seventeen years of study and research with the fertilizer industry, agriculture, and institutional activity in the southeastern and southern areas of the United States, have given Mr. Culpepper thorough experience in

Joe E. Culpepper,
Director of Sales
Spencer Chemical Company

the field as an agronomist, salesman, plus proved ability as an executive for the fertilizer industry. His knowledge of the most advanced practices for increasing agricultural production, which must be faced with the present food shortage, will be of benefit to the fertilizer industry and agriculture.

Wilbur-Ellis Appointments

The Wilbur-Ellis Company, Los Angeles, has announced the election of Ned Lewis as vice-president in charge of southern California and Arizona business. Other appointments include William E. Snyder as general manager of the Southwestern Supply Co., the company's fertilizer division; James E. Baker, manager of grain, feed and concentrates business; Robert B. Young, who will handle fish oil and meal, tallow and fiber in southern California.

PRELIMINARY REPORT ON FERTILIZER CONSUMPTION FOR THE YEAR ENDED JUNE 30, 1944

(Continued from page 9)

ture in Continental United States as well as the amounts shipped to Hawaii and Puerto Rico are given in Table II. The totals in this table are slightly different from the corresponding ones in Table I. The reason for this is that the data in the two tables are derived from entirely different sources.

The consumption of nitrogen, phosphoric acid, and potash is presented in Table III by states.

PCA'S RED INDIAN LOOKS AHEAD...

Soil scientists and practical farmers agree that the wisdom of high potash application is unquestioned. It is a thoroughly established fact that *Potash Pays*.

Potash is one of the large lacks in American soil. PCA, now in its second decade of service, faces the coming era of heavy fertilization, determined to make utmost effort to produce and supply high grade Red Muriate of Potash to meet the needs of the fertilizer industry . . . to continue to merit the confidence and reliance which the industry has displayed toward this company and its products.

POTASH COMPANY of AMERICA

CARLSBAD, NEW MEXICO

GENERAL SALES OFFICE...50 Broadway, New York, N. Y. • MIDWESTERN SALES OFFICE...612 Lehmann Bldg., Peoria, Ill.
SOUTHERN SALES OFFICE...Mortgage Guarantee Building, Atlanta, Ga.

GROUNDWORK FOR BUMPER CROPS...

The nation's farmers realize that successful harvests begin with conscientious planning and careful attention to new plants. They know that fertile soil is the first necessity for strong, healthy growth and abundant yields.

Your fertilizers, most of them compounded with potash, enable them to accomplish the huge task of raising enough food to fill the world's storehouses. Potash increases resistance to disease and drought . . . insures the healthy growth needed for bumper crops.

Thus Sunshine State Potash plays a vital part in the great national task of providing a hungry world with food.
